

Deimos Token
Whitepaper v.1

Legal Disclaimer

This White Paper provides full information about the **Deimos Token** project which is oriented to give users comprehensive materials about the technologies, features, and tools available in this project. We are oriented to give users a complete understanding of the project without offering to buy, sell, or invest in our project.

INTRODUCTION

Cryptocurrency has been well-known for its long-lasting improvement and acting as one of the actual holders of the world's economy. It is now surging above the \$1 trillion market cap, adding hundreds of percent development in the past year despite the chronic economic dispute due to coronavirus. New projects keep launching, but only a few of them having such a solid, well-built construction that will make it lasted in a league consisting of more than 2,000 competitors.

Despite the unstoppable growth of cryptocurrency as a phenomenon, the dynamics of price downs and falls are profoundly possible to happen. Staking is the best and the easiest solution to handle this challenge. Staking means keeping your assets, investments, or funds in one specific wallet for a certain period. This alternative is way better in the fee, efficiency, and simplicity than the conventional alternative: staking. For that reason, it has reached a constant, significant, evolving growth as that of cryptocurrency in recent years.

Cryptocurrency is essentially decentralized, meaning that it is neither controlled nor authorized by a particular party. So does staking. As a cryptocurrency alternative, staking works with the Proof of Stake (PoS) consensus by which users can control the block transactions themselves and gain them for their own. Compared to the Proof of Work (PoW), this consensus requires lesser energy. It also attempts to protect the users' own assets' privacy and security by blocking others' ways to mint the owned coins. In conclusion, it stands for double-locked privacy.

Cross-staking is employed to provide an entirely personal experience for users.

Deimos Token is the world's first decentralized cross-staking platform with guaranteed cashback and stable governance powered by **Binance Smart Chain**. We intend to provide a place where people can gain a guaranteed reward and experience the most outstanding service through a fair deal on every transaction's deflationary mechanism. Our biggest goal is to extend the existing cryptocurrency framework with an advanced, contemporary technology that compromises the present and future needs.

CHALLENGES & SOLUTIONS

When it comes to developing a digital currency, community becomes a crucial key. Deimos Token is oriented to be an open, transparent project with a reliable team and a colossal community. We aim to connect the dots between users anytime, anywhere, and create a bridge between each other to build the greatest network in the world. It is based on the basis of our project that is made to provide an infinite network with multi chains that is not centralized to anyone or any specific place. In the end, people with any background can hold the same chance to contribute to the development of cryptocurrency under Deimos Token's accomplishment.

FEATURES

The following points are the features that are provided under Deimos Token's system. Note that each feature is built to project users' best experience with critical considerations on the expected outcome.

Governance

We are totally instigated to build an open-source platform where everyone can contribute and raise their voices. This type of governance will provide the community a voice to determine how decisions are being and implemented in the project. Through this system, all holders could be assisted to build the present and future decision making of the project.

Rewards/Cross-staking

To get globally recognized and connect the dots between users across the globe, we employ the cross-staking alternative based on community. Cross-staking is a unique pattern of rewarding investors that staked on our platform to have the opportunity to receive staking rewards. Different currencies, such as BTC, USDT, ETH, and BNB will be available for rewards. 20% of the funds raised will be allocated for this matter.

Deflationary Mechanism

Digital currency market has always been dynamic and unpredictable. To prevent the worst scenario which triggers the longevity of the token supply, **Deimos Token** smart contract will contain core deflationary mechanism. It is helpful in reducing the supply of tokens in circulation, which will give an ultimate scarcity of **DIO** tokens. In the end, this mechanism is expected to give a major impact on the token price on the long run.

Cashback

Deimos Token's project team realized how people are urged to gain more and spend less. Hence, we apply the cashback mechanism as the most efficient and attractive way to facilitate everyone's needs. We are also urged to bring users to their expected outcome as the first-timer token holders. The mechanism of the cashback program will be elaborated later.

TOKEN ECONOMICS

- The following description elaborates the distribution of the supply and to which it will be allocated.
- The token comes up in a single amount with a certain division as attached in the following points.

Deimos Token produces the DIO ticker with a maximum supply of up to 10,000,000,000. It is allocated to the following portions.

Founder Financing
19.8% of the total token supply

Incentives
44% of the total token supply

Financing
20% of the total token supply

Business Development
9% of the total token supply

Reserve
5.2% of the total token supply

Liquidity Pool
2% of the total token supply

Max. supply : up to 10,000,000,000

Token Details

Key Metrics

Token Name: DIO

Token Type: BEP20

Contract Address:

0xb80A8EDd3730d82A941a1CdD7547E843fd5CA65C
